1- FUNCTION: May be a toxin that blocks ryanodine receptors.

1- SUBCELLULAR LOCATION: Secreted.

1- TISSUE SPECIFICITY: Produced by the venomous gland.

1- SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MAMMALIAN SCP/TPX1;

INSECTS AG3/AG5; FUNGI SC7/SC14 AND PLANTS PR-1.
                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE

Tornero P. Conejero V. Vera P.;

Tornero P. Conejero V. Vera P.;

A gene encoding a novel isoform of the PR-1 protein family from tomato 1s induced upon viroid infection.";

MOI. Gen. Genet. 243:47-53(1994)

1. FUNCTION: PROBABLY INVOLVED IN THE DEFENSE REACTION OF PLANTS

ACAINST PATHOCENS (BY SIMILARITY).

1. INDUCTION: SYNTHESIZED DURING PATHOGEN INFECTION OR OTHER STRESS-

1. SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MAMMALIAN SCP/TPX1;

INSECTS AG3/AG5; FUNGI SCT/SC14 AND PLANTS PR-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRIA_LYCES STANDARD; PRT; 175 AA.

*Allergens in Hymenoptera venom. XXII. Comparison of venoms from t

species of imported fire ants, Solenopsis invicta and richteri.*;

J. Allergy Clin. Immunol. 85:988-996(1990).

1. DISEASE: THE MOST COMMON CAUSE OF INSECT VENOM ALLERGY IN THE

SOUTHEASTERN QUITED STATES IS THE IMPORTED FIRE ANT.

1. SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MANMALIAN SCP/TPX.

INSECTS AG3/AG5; FUNGI SCT/SC14 AND PLANTS PR-1.

INDUCTION: By Androgens.
INDUCTION: By Androgens.
MISCELLANGOUS: SCP IS AN ANDROGEN-DEPENDENT PROTEIN, WHICH IS SECRETED BY THE EPIDIDYMAL EPITHELIUM AND THEN BECOMES ASSOCIATED WITH THE SPERM SURFACE. TWO MAJOR VARIANT PROTEIN D AND E DIFFER FROM EACH OTHER BY THEIR CARBOHYDRATE SIDE CHAINS.
SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MAMMALIAN SCP/TPX1; INSECTS AG3/AG5; FUNGI SC7/SC14 AND PLANTS PR-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            155
